. GP-Pro EX software creates a data library with a built-in A-to-Z (one-to-many) mapping of the M-to-N hierarchical data table with a single control method (mapping). No matter what the size or content of the map, it can be easily applied and edited with GP-Pro EX's integrated best dialog editing (binary direct editing) feature. Description This type of library is written in C/C++ code and has a unique "data table" mapping function that is built-in to the software. It also has the following unique and powerful functions: . Table is mapped to a data table, and the mapping is made "one-to-many", and it can be accessed from any node in the table (also from the special "Next" (next) node). This type of library does not have to be rewritten from scratch, and therefore you can flexibly edit the library at any time, even directly during real-time operation. This function ensures that the data is synchronized to the target directly, without any need to modify the data table at all, and ensures the fastest and most efficient data access. There is a special configuration UI that you can use to configure the data table mapping function. . This function makes it possible to write non-table-based data (such as ARI diagram, master data table, etc) into the data library. This function is used to write map data directly without converting it into the data table. Map data can be further processed using the ladder program after it has been written into the library. . . cooking The type of learning outcomes I expect from reading is a vast one. I look for connections to ideas I have within my life, I read to learn about other lives, to find answers to questions I have but I also look for ways to benefit my life and for me the most important factor is that the book can entertain me. Yes I read interesting, insightful books but it's about the people I read about,
