****XREF** : **C++**** AutoCAD C++ is the scripting and automating language for AutoCAD. It is a language designed for both engineers and artists. In addition to drawing commands, the language contains commands for parameters, selecting tools, adding objects, selecting areas, and creating entities. The language can be used for both 2D and 3D drawing. C++ is used for applications such as importing and exporting drawings and for the AutoCAD 360 platform. The language is different from C# and ObjectARX in that it can be used for both the .NET framework and a desktop application (although it is not officially supported). ****XREF** : **ObjectARX**** ObjectARX is an AutoCAD extension technology that lets users build their own programming languages and applications using programming languages such as C# and Visual LISP. The concept is similar to .NET's COM. ObjectARX was initially created for the AutoCAD drawing environment, but the company now uses ObjectARX for other AutoCAD products. ObjectARX can also be used for the Windows desktop application. ****XREF** : **Visual LISP**** Visual LISP is another type of script language that was designed for AutoCAD and other 3D application. Like ObjectARX, the language is based on C# but is the only AutoCAD language that can be used for both AutoCAD and the Windows desktop. Like C#, Visual LISP can be used to automate tasks and is most often used for data analysis. Get even more out of line selection with the new “Join Selection by Radius” command in AutoCAD. Use this command to draw a circle or a ring with an adjustable diameter or “nose.” (video: 2:59 min.) Use circle selection to easily create arcs and circles. Create arcs that increase or decrease in radius or just a circle in one direction or the other. (video: 3:12 min.) Get your 2D drawing onto a 3D object with the new “Project onto Geometry” command. Select a 2D or 3D object, choose a 2D point, or measure a length to project it onto the 3D geometry. (video: 2:00 min.) Draw a freehand path from 2D to 3D. A freehand line lets you draw a path in any direction. Start with the Spline Draw feature and follow the procedure to adjust the lines to meet the final line’s settings. (video: 2:00 min.) Use 2D to 3D translation to extend 2D surfaces in your 3D models.
