Shouldn't WCF guarantee same order of execution of async methods? I have a WCF service that has the following interface:
[ServiceContract] [AspNetCompatibilityRequirements(RequirementsMode =
AspNetCompatibilityRequirementsMode.Allowed)] public interface IMyService { [OperationContract]
[FaultContract(typeof(MyFault))] void DoStuff(); [OperationContract] [FaultContract(typeof(MyFault))] Task
GetMyTypeAsync(); } GetMyTypeAsync() is actually an async method. And I have a client application that executes this call,
using: var client = new MyServiceClient(); var response = await client.GetMyTypeAsync(); I know that it's possible to reorder
the execution of calls to the service, by calling DoStuff() first and then calling GetMyTypeAsync(), but that would defeat the
purpose of the asynchronous methods. How can the order be guaranteed in this case? A: The WCF Communication Layer is
loosely based on the concept of channels. What it means is, WCF will marshal a request to a queue or channel and process it
asynchronously. It will wait until the response is received and then unmarshal the response and write it to the result channel or
the response queue. If the response cannot be handled by a single operation then it will be processed by multiple operations.
With this being said, yes it is true that the exact
