InSearch

What's New In InSearch?

---------- InSearch is a powerful but fast internet search tool to search information from any and all major search engines, like Google, Yahoo, and Altavista, and read all the links to the sites you've found. InSearch allows you to search any website, like Google, Yahoo, Altavista, and Yandex, for it's links. You can also search multiple search engines at same time. In InSearch, you can save all the results of your search by email to your PC, instead of saving to files on the website. All the found results of your search can be saved at your disk so you can find them anytime, without Internet connection. You don't have to go to all the found links manually. InInSearch can correct all the results, so all the found results are the real results. You can also block unwanted sites. In InSearch you can specify the search engines that you want to use. It is very easy to use, the search engine will be opened in auto-mode and the auto-mode will be started when you use your hotkey "I" (Space) key. You can also specify the order of the search engines, the order will be kept. In InSearch, when you find all the links in a site, you can copy all the links to an email (you can also use it to find a link to a site). You can specify the email address, the email subject, the date when the message will be sent (a message will be sent if you find any link, it may be once or twice or a hundred times), and it will be sent to you by email, so you can find all the links that you found quickly and easily without wasting your time on the web. In InSearch you can save all the found pages to your HDD by email. It's very easy to save the found pages to your HDD. You just need to specify the mail address, the date when you want to save it, and it will be saved to your HDD automatically. So you can find all the pages that you found by email at anytime, without Internet connection. InInSearch you can make a batch of mail, so it will be saved to your HDD automatically. You can just specify the mail address, the date when you want to save it, and it will be saved to your HDD automatically. In InSearch you can block unwanted sites. InInSearch you can specify the blocked sites, by email address. After the specified sites are blocked, it will be added to the blocked page. You can specify the email address of the sites that you want to block, like porn, spyware and so on. In InSearch
