Being a big fan of cloud-based software, I have downloaded WinTricks for my Windows 7 PC, because I know there are more tips and tricks to be learnt, especially as my PC is on the verge of turning 8 years old. When I was trying to access the links of the manual, it was not taking me anywhere, so I guess the manual needs some work in the links. I understand I need to first save the file to my computer before I am able to open it. Should I save it to some folder? To make the manual easy to read, I think it should be easier to download the.chm file, maybe in its own folder. My PC is also loading WinTricks automatically when I tried to download some file. I just want to know, if I am using WinTricks, when do I need to download it? Will it be automatically updated when it is installed or do I have to install it every time? I have already managed to download WinTricks, and the manual should be easier to get to know. The instructions on the website are not very clear. Perhaps the instructions can be made clearer.

There are three main types of kana used in writing Japanese: hiragana, katakana, and kanji. In practice, hiragana and katakana are used for morphemes to represent basic categories of word (e.g. noun, verb, adjective, particle, etc.) while kanji are typically used for onomatopoeia or loan words. A few characters are used for specific phonetic purposes. Katakana and hiragana can be used singly, but the most common use of katakana is in combination with hiragana, forming what are known as katakana compounds. Typically, the hiragana syllables ka and ta form one compound, while the katakana syllables ka, ki and mi form another.
