The effect of normal pregnancy on renal function and sodium excretion. The effect of normal pregnancy on renal function and sodium excretion has been studied in normal pregnant women and women with hypertension. Pregnant women with and without hypertension were compared with nonpregnant controls. In both groups, renal plasma flow (RPF), glomerular filtration rate (GFR), effective renal plasma flow (ERPF) and filtration fraction (FF) increased after the 4th month of gestation. RPF in the pregnant women with hypertension rose from 1.12 to 1.47 ml/min, whereas RPF in the pregnant women without hypertension increased from 1.02 to 1.18 ml/min, (p less than 0.001). The increase in GFR was significantly greater in the pregnant women with hypertension (p less than 0.01). The mean arterial pressure and the plasma volume increased significantly in both groups. Sodium excretion increased significantly in both groups, but the increase in sodium excretion was greater in the pregnant women with hypertension (p less than 0.001). We conclude that hypertension during pregnancy does not produce abnormalities of renal function or sodium excretion similar to those observed in patients with chronic hypertension.Nicholas House Nicholas House may refer to: Nicholas House (Virginia), listed on the National Register of Historic Places (NRHP) in Virginia John M.
